PROFESSIONAL SUMMARY

Motivated Computer Science student with strong foundations in full-stack web development, Python, relational database design (3NF), and software engineering. Passionate about AI/ML, Natural Language Processing (NLP), and Generative AI applications. Experienced in developing secure CRUD systems, asynchronous API workflows, and interactive web tools. Seeking an internship or entry-level software engineering role to build impactful real-world software.

EDUCATION

Bachelor of Science in Computer Science (B.Sc. CS) — ASM CSIT (Affiliated to SPPU) 2023 – 2026 (Pune, MH)

Curriculum Pattern: NEP CBCS | Coursework: Data Structures & Algorithms, Software Engineering, RDBMS, AI Fundamentals, Web Development, OOP (C++/Python).

TECHNICAL SKILLS

Languages:	Python, JavaScript (ES6+), C, SQL, HTML5, CSS3
Web & Frameworks:	React 18, Node.js, Express, Django, Tailwind CSS, Bootstrap 5, Vite
Databases:	MySQL, SQLite3, MongoDB, Relational Schema Normalization (3NF)
AI / ML & NLP:	NLP Fundamentals, LLM APIs (Gemini, Replicate), RAG Architectures, Prompt Engineering
Tools & Platforms:	Git, GitHub, VS Code, Postman, Vercel, RESTful APIs, Linux/Windows CLI

FEATURED PROJECTS

Smart Inventory Management System (SIMS) — Academic Capstone Mini Project 2025 – 2026

Tech: Python, Django, MySQL, SQLite3, Bootstrap 5, Chart.js

- Designed a 3NF-normalized relational database system with session authentication and role management (Owner, Staff).
- Implemented autonomous low-stock detection engine with automated reorder threshold triggers and stock valuation metrics.
- Built atomic dual-direction inventory updates with row-level locking (select_for_update) to prevent race conditions during counter sales.

Reel Forge — Text-to-Video Web App — Generative AI Application 2025

Tech: Node.js, Express, Replicate AI API, JavaScript, Tailwind CSS

- Developed a full-stack web application converting written creative prompts into AI video clips using state-of-the-art diffusion models.
- Engineered asynchronous API job polling with real-time status tracking and error-resilient streaming responses.
- Designed a sleek dark-mode UI with immediate media playback, download capabilities, and responsive layouts.

Interactive Python Learning Platform — Educational Web Portal 2024

Tech: HTML5, CSS3, JavaScript, Python

- Created a progressive curriculum platform covering Python fundamentals, OOP principles, and data structures.
- Implemented interactive code snippets with syntax highlighting and dynamic progress tracking across modules.

CERTIFICATIONS & ACADEMIC ACHIEVEMENTS

- **Python for Data Science & Machine Learning** — Completed coursework covering scientific stack, data wrangling, and ML algorithms.
- **Full-Stack Web Development** — Hands-on certification covering frontend development, backend REST APIs, authentication, and databases.
- **Course Mini Project Excellence** — Awarded top marks for system design, normalization, and UML diagrams in CS-231-FP practical evaluation.
